

“The looming network crash threatens to cost Americans as much as the financial crisis!” Yet...

One Technology Can Keep America from “Going Dark”

“One of the Best Inventions of the Year” ~ *Time*

This \$300 billion breakthrough is poised to hand you an easy 412%, starting in 48 hours...

Dear Reader,

Just over a month ago, 32 million cell and Internet users froze in their tracks...

Without warning, they were thrown into the dark, cut off from communication and business transactions. It was the second occurrence in a week. No explanation was ever given by either AT&T or Verizon, the \$82 billion telecom giants.

Just a few days earlier, hundreds of thousands of iPhone users in Great Britain were left in the dark for the third time in a year.

On October 2nd, nearly 1 million T-Mobile Sidekick users lost all of their personal data - business contacts, appointments, addresses - everything. Outraged customers filed class action lawsuits just two days later - adding another to a long list.

And on January 29, 2010, Google Nexus One users nationwide also lost all of their data during after being left in the dark for more than eight hours. Again, no explanation was given.

Imagine if you had a life-or-death emergency... were stranded... desperately needed to contact a loved one... and were cutoff at the worst possible moment.

How frightening and dangerous would this be?

Beyond the danger, outrage and the lawsuits, every crash costs America millions of dollars - with potential losses in the billions.

Right now, these cracks in the system are only getting bigger by the day.

According to the U.S. Internet Industry Association, to fix the bandwidth problem in the networks will now cost: “\$300 billion to \$1 trillion for the United States alone...”

I’m here to alert you to one company with a breakthrough technology - the only one that can solve this crisis.

Demand is already skyrocketing for this breakthrough. Just consider that **this company’s income has already risen 45 times over in the last three quarters.**

And it’s got no competition. In fact, it’s about to hold every major telecom in the U.S. and abroad hostage - for a king’s ransom.

Frankly, it could be a bonanza for anyone serious about building wealth quickly.

Follow with me, and I’ll show you how you could capture gains of 412% along the way.

Perhaps the easiest potential “4-bagger” any individual will ever see in his lifetime.

Let me show you what I mean...

“The Bigger the Problem... The Bigger the Profits”

This has never been more true than today. That’s because the looming telecom crisis doesn’t get news coverage - just the way the major Telecoms like it.

In fact, there are 9 major major culprits that threaten to crash the networks, creating what top Internet security analysts are calling a “digital 911.” But let me tell you about just one threat right here, right now: Smartphones.

Over just the last three years, smartphone traffic has multiplied over 50 times. And that’s just on AT&T’s iPhone network alone.

Telecoms Are Taking Desperate Measures – And Losing Court Cases...

– Comcast was sued by 4 towns in Michigan after it was caught delaying transfers of large media files and limiting the amount of data users can download.

– AT&T customers filed a class-action lawsuit after experiencing slow connections when the company began “capping” its lines.

– 80,000 HughesNet customers in California filed a class action suit after being throttled below dial-up speeds for exceeding download caps.

– RadioShack and AT&T Mobility were hit with a class action lawsuit after hitting unwitting customers with fees over \$5,000 each for exceeding usage limits.

As the problem escalates fast, one company is set to score oversized profits – and hand them over to its shareholders...

Consider the billions of emails, text messages, videos, voice mails, and attachments that over 100 million Americans send every day...

Or that you can talk AND surf the web on your phone - at the same time!

And it's no wonder iPhone users have "... increased their usage by about 100%," according to the *The New York Times*. In fact, the average iPhone customer uses 10 times the network capacity of the average smartphone.

Across America, wireless data traffic on AT&T's network has grown nearly 7,000% over the last three years.

"There's just no parallel for the demand," says AT&T's Chief Technology Officer.

"We're just starting to scratch the surface of [what] AT&T is facing," says a senior securities analyst with Piper Jaffray.

Bottom line: The most sophisticated information technologies are just so much scrap if they can't transmit information.

And the transmission of all this data requires **unprecedented amounts of bandwidth**. The demand is so great, it's threatening to crack the networks in the U.S.

So let me get to the good news - the only viable solution to this crisis. It's a play destined to hand you the opportunity for as much as 412% gains in the coming months...

It's about a technology that just increased the "pipeline" for digital data by 10,000 times.

That's not a typo you're seeing above. That's a "1" with four zeros.

It explains why the potential for this company's stock is so explosive, and why it's heading for a spike steep enough it could quadruple your money.

The 8 Other Culprits That Threaten to Crash the U.S.

As this crisis deepens, Gigabytes become obsolete. Now growth is measured in Petabytes. (1 Petabyte = 1,000,000 Gigabytes.)

Since the dawn of recorded history, the entire written works of mankind would amount to 50 Petabytes of data.

Here is the growth in Petabytes of transmission calculated from 2008 through 2013:

1. **Internet Video to TV – 41,000%**
2. **Internet Video to PC – 1,015%**
3. **Internet Video Communications – 1,033%**
4. **Mobile Data Internet Traffic – 6,517%**
5. **Consumer Gaming – 922%**
6. **Web, Email & Data Traffic – 159%**
7. **Consumer Traffic – 464%**
8. **File Sharing – 149%**

Source: Cisco VNI, 2009

It's also why a few in-the-know analysts believe that it could set the stage for "The Second Coming of the Digital Age."

25 Trillion Bits Per Second... Wrapped Around a Pencil

The breakthrough I'm talking about is in fiber optics - but not the way you may think about it....

You see, the current fiber transmission rate is 2.5 billion bits per second. In its day, it was an incredible feat.

Yet this new breakthrough technology creates a pipeline that handles 25 trillion bits per second.

That's 10,000 times greater than what's commonly what's being used throughout the world today.

That alone would have any technology investor salivating over the prospects. Yet the true genius of this invention is even more powerful. It's what has the major telecoms chomping at the bit...

You see, this breakthrough technology is able to bend light.

Most Scientists Said It Couldn't Be Done...

By the middle of 2007, this company's scientists were doing what no scientist in his right mind ever thought could be done. Except for measurements in astronomy - where light is bent by the extreme gravitational forces of the sun - it's never been "bent" for practical purposes on earth.

It used to be that every time a fiber cable was bent, the light carrying the data vanished. A few slight turns of the cable, and the data disintegrated. Even if it's bent just a little, the data escapes.

This drove telecom companies nearly half crazy, drilling through walls of apartment buildings, offices and other tight places.

That was before nanotechnology and the breakthrough that's taking hold today, making it possible for this company to wrap its optical fiber. The "nanostructure" guides light back into the fiber, even when it's bent.

It's so effective that these precious cables can be wrapped around a pencil or even tied in knot - with no loss of data... while still transmitting 10,000 times more information than regular fiber.

"2010 Bandwidth Explosion Expected, Demand for Fiber will Skyrocket"

- *WebNewsWire.com*, December 30, 2009

Not only that, its superior coating resists environmental damage - making it ideal for connecting rural or hazardous areas. Whether you are a telecom or a government entity deploying the \$2 billion stimulus money linking rural America or the \$8 billion for Australia's national linking plan, having only the strongest and fastest fiber optic cable for the job is critical.

And telecoms, facing a catastrophic breakdown, are catching on fast...

As Fox Business just reported:

“Demand for optical fiber grew by more than 19% in 2009 despite the recession.”

For high growth in the next 6 to 12 months, I'm begging my readers to get in now... before the coming wave of sales takes hold and pushes this company up even faster.

It won't be long before other analysts start crunching the numbers on this company and realize that it has:

- **A 15% Return on Equity** - pummeling the 1% industry average...
- **A whopping net profit margin of 37%**, blasting light years ahead of the 3% industry average...
- **An amazing \$3 billion investment in China**, with eight manufacturing plants.

That's not all.

Quarterly profits for this little gem have nearly tripled from \$249 million to \$740 million... revenue has increased 41%!

And as I've said, **income shot up over 45 times in just three quarters!**

If that's not the definition of a blast off, I don't know what it. It's also why I'm recommending to my readers that they grab shares of this one as fast as they can for estimated gains of **412% in the coming months...**

Why I've Got Some Skin in This Game

My name is Horacio Márquez.

“Netflix Everywhere: Sorry Cable, You're History”

- *Wired*, September 21, 2009

The Pew Research Center estimates that 22 percent of American adults have cut back or canceled cable within the past year. And within that group, 32% have connected their computers to their TVs to view Web video.

Consumers are simply ditching cable and getting loads of TV shows and movies from services like Hulu, Netflix and iTunes.

With Netflix alone, nearly 3 million users now access its instant streaming service, watching 5 million movies and TV shows every week on their PCs... Xbox 360s... Blu-ray players... HDTVs.

Remember, this is just smartphone use.

It's no wonder that Cisco Systems projects global data traffic to double every year between now and 2013.

Not only that, but according to The U.S. Internet Industry Association:

“Internet traffic across borders has been rising at an average rate of 75 percent a year, while bandwidth capacity to handle this traffic is expanding by about 45 percent a year.”

Which means that as more and more of the world's billions of citizens “plug in” and expect faster and more reliable communications, the current standard of only 2.5 billion bits per second will only hasten a “digital 911”...

Only this time it will be global.

So forget about Apple, Verizon, Sprint, Blackberry or any other hip household brand. *The money behind the money* is in the one company that can deliver bandwidth - without which every other innovation becomes useless. It's that simple.

Wealth builders who see the connection now before it's too late could be looking at incredible gains along the way, reaching as high as 412% or more...

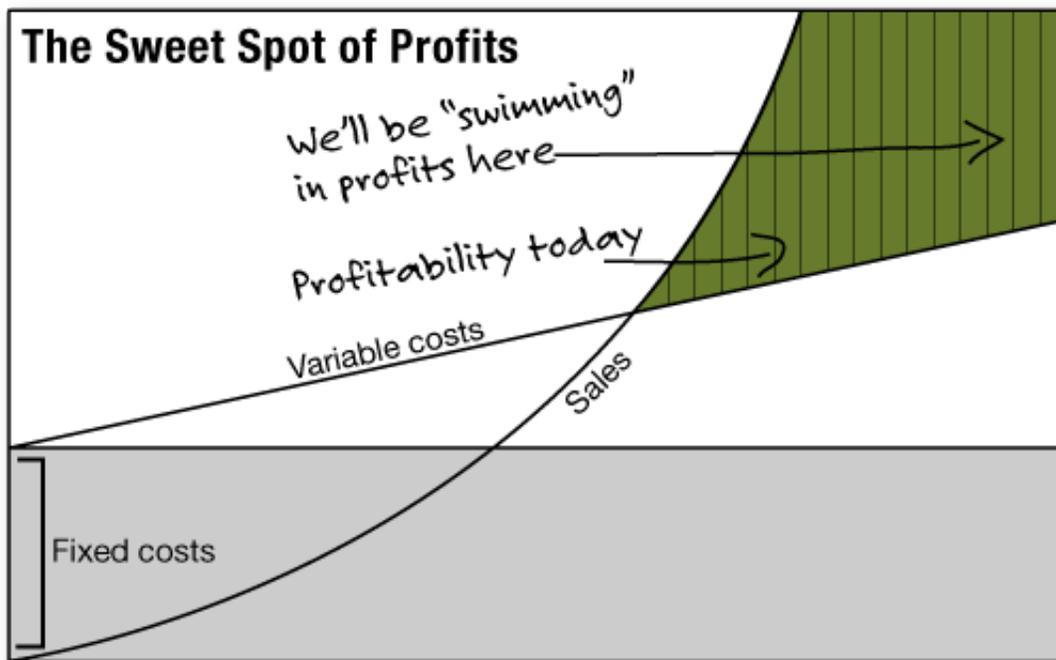

When Profits Rise, Stocks Explode To The “Sweet Spot”

The amazing thing about this technology and the company that owns it is that its profits are set to rise at an exponential rate. And that means hefty gains for shareholders.

For every up-tic, profits can explode by 3X to 20X seemingly overnight.

It's because of something called “operational leverage.” This is where fixed costs stay the same, and the cost of materials (variable costs) rise only with every new foot of cable.

So now we're about to hit the “sweet spot” with this company. That's where this company's profits on every foot of cable sold increase at an exponential rate. And that's right where we're headed.

Frankly, this is just the icing on the cake - and why capturing gains of 412% is inevitable.

Fact is, when profits rise, stock prices can explode...

This is what *always* happens to established goods that go into high demand, like the fiber company I'm talking about here.

Their stock price jumps up to *7 times* as high as any increase in the price of the good!

Check out what happens in oil when the demand skyrockets...

From August 2007 to July 2008 a barrel of oil increased a nice 110%, but **Evolution Petroleum soared 183%... Comstock Resources jumped 206%... and W&T Offshore popped a whopping 277%.**

Or consider gold...

From March 2003 to today, the price of gold jumped 70%, yet **Kinross Gold jumped 191% and Barrick Gold popped 243%.**

Or iron ore...

As China increased imports threefold to build power plants and skyscrapers, iron's price per pound climbed 82% from September 2006 to May 2008.

Yet, Russia's **Mechel Resources** shot up **631%**! It notched nearly 7 times the gain of the underlying commodity.

Yet the thing to know right now with fiber is that this is just one of many power plays in the making...

My VIP Strategy Has Proven Accurate Time After Time...

Fact is, my Money Map VIP strategy has pinpointed big gainers like this optical fiber company time and again.

Here are just a few of the gains I racked up for subscribers to my *Money Map VIP Trader*:

- **582.3%** total gains on Petroleo Brasileiro, the mega oil and gas producer in Latin America's most vibrant economy...
- **97%** total gains on Transocean, the world's largest offshore oil and gas driller...
- **92.45%** on Tenaris, a leading supplier of tubes for energy companies...
- **202.8%** total gains on Unibanco, the third largest privately owned bank in Brazil.

Gains like these come when you can forecast accurately the ebb and flow of demand across the globe - and all the money that chases it.

And more importantly... when you know what to do with all that information.

Global demand and the surge of cash work the way high- and low-pressure weather systems do.

Great accumulations of wealth ("high pressure zones") in certain parts of the world create huge opportunities ("low pressure zones") in other parts.

Then, as money abhors a vacuum - *whoosh!* - it races from accumulation to opportunity.

Virtually any policy, economic, or market change or innovation can trigger massive money flows. (In this case, the high-pressure zone is being created by the bandwidth crisis.)

And the bigger or more fundamental the change, the bigger the impact it has on money flows.

China investing over \$900 billion in infrastructure projects... electricity shortages driving \$3 trillion in investment capital into power production... Brazil locking up over 35% of the world's iron

**The Variables of My
"Venture Index Proxy"
(VIP) Strategy...**

ore reserves.

You can map these flows much as meteorologists map weather patterns....

But here's the key point...

When you've spent a lifetime studying the impact of these money flows as I have, you can predict the course of the resulting financial benefits precisely.

And you can position yourself ahead of time to profit from them. That's how I showed wealth builders gains like these...

- **181.6%** on BHP Billiton, perhaps the world's largest resources company
- **170%** on Peabody Energy, the world's largest private sector coal company
- **53.4%** total gains on Cameco, a dominant nuclear energy company

My VIP method crunches over 24 pieces of data to locate these economic events and forecast their trajectory.

It then zeroes in on individual companies ideally positioned to ride these "currents" to round after round of fat profits.

The acronym "VIP" in *Money Map VIP Trader* stands for Venture Index Proxy. As your proxy, I scour the world for companies poised for explosive growth - using the same criteria a venture capitalist would.

That's how I helped readers lock on to whopping gains of 75.79%, 285.19% and 144.44% in just a few months on our position on Ilici Bank, India's second largest bank.

Country-Specific:

- Projected country GDP change in acceleration/deceleration rate
- Monetary policy tightness proprietary index
- Fiscal and current account change in strengthening / weakening rate
- Change in foreign direct investment and portfolio investment
- Inflation trend analysis and composition by industry and sector
- Change in debt and foreign reserve flows
- Political and economic cycle analysis

Industry-Specific:

- Legislative and regulatory changes
- Technological innovation
- Favored industries and sectors to benefit from projected country and global developments

Company-Specific:

- Barriers to entry
- Barriers to exit
- Power of suppliers
- Power of buyers
- Value chain analysis
- Competitive dynamics
- Excess capacity
- Sustainability of competitive advantages
- Gross operating and net margin projected change
- Projected financial leverage
- Economies of scale, of scope and experience curve effects
- Capital structure

Others looked and then looked away. I evaluated it like a venture capitalist and immediately saw its explosive potential - a potential it fulfilled in months.

(In fact, I'll often recommend readers invest several times in a company if it is particularly hot - each time with an opportunity to come away with double and triple-digit gains - just as venture capitalists invest successive tranches of capital in an enterprise as it proves itself.)

Stock-Specific:

- Asset valuation and comparable valuation metrics relative to peers and market
- Market, industry and stock technical analysis

What's more, my VIP method allows me to distinguish minor oscillations - head fakes - from the major trends that drive the mega winners... the ones ready to provide memory-making returns.

Even as the biggest economic meltdown since the Great Depression was stripping ill-informed investors of their hard-won cash... even when others were losing money... my strategy gave ***Money Map VIP Traders*** significant gains...

- **58.99%** on iron ore miner Vale, as it kept China's steel mills humming through the recession.
- **43.8%** on Petrobras, the Brazilian oil company, even as oil lost three quarters of its value!
- **24.8%** on Taiwan Semiconductors, as Obama's stimulus program pays for hi-tech innovations.
- **26.54%** on the SP 500 SPDR - if you knew how to play it.

In fact, since October 2008, while most investors were losing their shirts in the imploding markets, ***Money Map VIP Trader*** showed subscribers a string of plays that **trounced the S&P 500 by an average of 31.3%**.

No doubt, the "high pressure zone" being created by the worldwide demand for fiber optic cable offers the potential for fast, life-changing gains...

But please understand this:

This is just one of the opportunities my VIP method identifies on a regular basis... And just one of the "high pressure" opportunities on the table right now...

My Next "Boring" Double in the Making...

In fact, the Money Map VIP method has identified one of the most "boring" profit plays I've seen in quite a while... and "boring" is just the way I like. That means it's "off the radar" of Wall Street analysts... At least until it triggers the

algorithms of institutional buyers, who then flood it with money.

So get ready. This play is in **paper pulp**. It may not make for cocktail chatter. But the potential gains - in this case 203% - can get my heart racing.

You see, the sole source of this company's pulp comes from one of the fastest-growing trees in the entire world - eucalyptus. And its South American location gives it the ideal place to grow.

While North America's climate only makes possible 6 tons per hectare per year, this special location down south produces 45 tons.

When you multiply that by the 600,000 hectares of plantations this company owns (and its significantly lower production costs), it's no wonder that its production capacity is nearly **twice as much as the second largest in the industry**.

But get this: It already has a lock on 22% of the world's pulp market - **and is expected to have 60% to 70% of it in the next few years**.

This unique company has just popped 36.23% on it's way to a projected **203% spike**.

Now is the perfect time to grab this pick at bargain-basement prices...

And yet, this is only a sampling of what the VIP strategy can do for wealth builders in the coming weeks and months...

How You'll Profit From the 5 Biggest Trends in History...

Right now, and for a limited time, I've inviting you to join the other members of my Money Map VIP service. And I beg you, my friend, please take this invitation seriously.

You see, I've spent the last 25 years of my professional life developing the Money Map Method. Right now, it's pointing to the five biggest trends in the economic history of the world.

These are events that will be written about for decades to come. It's never been more important to position yourself now, and to learn how to use them to your advantage. Let me show you what the Money Map has discovered...

Profit Trend #1: Currency Devaluation

One of the key measures being used by advanced economies to jumpstart their debt-saddled economies is through devaluing their currencies to stay ahead of fast-growing rivals in the developing world.

Because as discretionary income explodes in emerging economies, one of the first and fastest growing targets is tourism - internal and external.

Luckily, this airline is perfectly poised to take advantage of its country's new appetite for travel. It's the only low-cost and low-fare carrier available in the country, and already owns 41.3% of the domestic market. Domestic passenger traffic increased 31.4% and international passenger traffic increased 36.9% in just one year... while income has exploded nearly 200% in just two.

Armed with 30 brand new Boeing 737s and a market growing by leaps and bounds, I fully expect at least **141% gains within the year from this dynamo.**

Profit Trend #2: Global Stimuli

After the global meltdown, all the G20 countries agreed to cooperate in stimulating the global economy with monetary and fiscal measures. Little did they know that they just lit a match under one of the most cyclical industries - one that is also perfectly leveraged to foreign exchange rates.

After getting hammered badly during the meltdown, the opportunity to jump back into it has never been better, and one company stands heads and shoulders above its competitors, with dominant positions supplying red-hot niches such as semi-conductors, appliances and disinfectants.

Not only that, it is also perfectly positioned for extremely fast growth at the start of a new multi-year bull cycle in agriculture - which is why we have every reason to estimate **200% gains from this blockbuster.**

Profit Trend #3: Resources

China's stupendous growth might be old news, but there is never a lack of new ways to profit from it. Because its unending appetite for more durable infrastructure and durable goods (cars, appliances) means an unending need for raw materials - principally steel.

While most investors will just stop right there, that would be a big mistake: Because a bigger demand for steel means *an even bigger demand* for the materials that help produce it - in this case, coking coal.

With China as its largest customer, and Citigroup estimating coking coal prices to rise 14% this year, this company already enjoys an enviable structural advantage, and **could easily hand you 189% gains.**

Profit Trend #4: Debt

As the US government and the Federal Reserve go all-out to reflate the US economy with 0% interest rates and unprecedented levels of spending, banks are now swimming in cash - paying nothing for deposits while charging market rates for loans.

Unfair? Yes - but you can make a small fortune off of this trend by picking up one of the largest weak banks that is using it to recapitalize. And because of the huge uncertainties surrounding the disposal of its "toxic" assets and its performance, it is now trading at a HUGE discount to fair value...

In fact, this is one of the biggest and most stunning turnaround plays I have ever seen. (One money manager, David Tepper, was able to deliver 117.3% returns with this strategy). **Get set for 115% gains in less than 6 months.**

Profit Trend #5: Global Deleveraging

When the global financial crisis crushed over-leveraged players with risky portfolios, the remaining survivors raced to massively deleverage as quickly as possible, making them even tougher in the process.

But one special player was never over-extended to begin with, and was able to cherry-pick only the very best assets, personnel and business from its collapsing rivals. It's now expanding like never before across emerging markets and just posted record net revenues of \$2.1 billion, in addition to record net earnings to shareholders and net earnings per share.

Bottom Line: Hold on tight to this one for estimated **200% gains**.

Join Me Now for the Profits of a Lifetime

Not many investors get the chance to tap into the kind of global research offered by ***Money Map VIP Trader***.

Yet, ***Money Map VIP Trader*** gives you these kinds of opportunities week after week. It's the only method that tracks "high-pressure" economic imbalances on a global scale. And then it zeroes on the companies that stand to benefit in a big way.

It's like stacking the deck in your favor because the VIP method locks on to inevitables in the market. Those price movements that turn into unstoppable forces.

I'd like to offer you the chance to join these lucky few...

What You Get Immediately

When you accept my invitation to ***Money Map VIP Trader***, I'll rush you password-protected access to our site with full details on all my current recommendations.

I'll even rush you my special alert on the fiber optic company right in your confirmation letter. You'll get it immediately upon acceptance.

Then, you'll start to get...

Weekly Email Recommendations: Once a week, I'll send you a priority report with new recommendations, market updates, and analysis...

Each recommendation is based on the highest quality research aimed at maximum

gain and safety. And I explain in detail the timing and reasons for making the recommendation.

Bi-Weekly Email Updates: Between recommendations, you receive regular email updates on the portfolio, including how and when to close positions to preserve your profits.

Money Map VIP Trader is so simple to use, anyone with a computer and a telephone can plug into huge gains almost immediately.

And even though you may have never heard of most of the stocks I talk about, they can all be purchased through your regular broker.

But you must be willing to act now...

In recent months, some incredible off-the-radar moves have taken place...

- **Cott Corp.**, a soda pop maker, is up **781%**...
- **Sealy Corp.**, a bed maker, has popped **629%**...

With **Money Map VIP Trader**, you have the opportunity to profit from the biggest, global high-pressure zones... demand imbalances... and tsunami-sized money flows. You'll gain immediate access to research on the hottest companies profiting from those money flows - and with strategies to minimize risk and maximize your gains.

The World's Riches Await You

And these are far from the only opportunities I'm thrilled to share with you. Take a peek at a few of the other golden opportunities you'll discover when you join us at **Money Map VIP Trader**:

- A South American energy wonder has just stumbled upon the Holy Grail - 30-35 billion barrels of newly discovered oil! It recently announced a five-year \$174.4 billion plan to extract this mother lode and reached an agreement with China for future oil supplies for a \$10 billion credit line. Even better: This mammoth's profit margin is nearly double the industry average. **Expected gains: 89% in the next four months.**
- A travel giant that has grabbed 50% of China's market, crushing Wall Street's earnings forecasts with five-year sales growth of 53.6% and income gains of 217%. **Expected gains: 307% in the next 24 months.**
- Because of massive infrastructure spending, China's demand for imported iron ore has exploded over 47% since last year - and this company hit the jackpot by becoming its largest supplier. Net assets have exploded over 250% in the last three years from \$15 billion to over \$40 billion, and it is now operating on a 32.02% profit margin. **Expected gains: 153% in 10**

months.

- This American kitchen staple serves Russians 32 billion homemade servings a year - in about 1/3 the regular time. The product's convenience and cost-savings have kept sales high with increased gross margins of 41.6%.
Expected gains: at least 102% returns in the next 12 months.

Any one of these alone could more than make your investing year. So there's little time to delay.

Waiting Even Days Could Cost You 50% or More...

With the looming network crisis growing larger by the day - and this company's income expanding exponentially - there's little time to waste on the fiber company I've been telling you about.

Why miss out on even a penny of the projected 412% gain?

Or, for that matter, any of the opportunities you've already seen, including the 5 Biggest Profit Trends in History. Missing those major trends could set a wealth builder back for years to come.

Without *Money Map VIP Trader*, you're almost certain to miss out.

That's why it's so important to take advantage of what the *Money Map VIP Trader* has to offer today.

Not many investors get the chance to tap into the kind of research offered by *Money Map VIP Trader*.

That's why I'd like to offer you the chance to join the lucky few who know how to use these forces to their immense advantage instead of passively resigning themselves with the rest of the herd...

Michael Schwartz, an entrepreneur planning for retirement, combined my strategy with options to make **1,805% on insurance**.

Put \$2,405 in Your Pocket Immediately...

But timing is everything.

And all too often we "put off" doing things, even when we know that acting now will only benefit us. Procrastination has lost people fortunes...

You see, if you purchased research like this from other equity researchers you'd pay dearly for their services - investment management fees, custodial fees, consultant fees and even transaction fees - costing upwards of \$20,000 or more.

And in the past, the listed price for my VIP research has been \$2,900 per year. This is still a great deal, considering that any one recommendation mentioned in this report could easily pay for the price of a subscription many times over, just

as Maria L. says below.

But right now, my publisher has agreed to reduce the normal subscription fee for **Money Map VIP Trader** by an astounding \$2,405 for 6 months... if you get on board now. That's a savings of 83% on an already low price.

That's money you can put right back in your pocket... or use to start your path on the easiest potential 4-bagger to come around in years.

Fact is, unless I can convince you to give my research service a try, you could miss out on the investments of a lifetime. And I don't want to see that happen.

In fact, I'm even willing to go one step farther, just to prove a point...

"When I signed on I was looking for additional ideas. Horacio's first pick to me was PBR. It paid my subscription for the next three years, a sensational start. I'm also happy to see that he uses technical analysis in his work. All in all I am delighted with the service.

- Maria L.

Every Single Barrier to Wealth Removed

During this special period, you're going to have the opportunity to test drive the **Money Map VIP Trader**, and do it at absolutely no risk.

That's right. Try my **Money Map VIP Trader** for the next six months. Read my alerts and report... see in detail how the VIP Strategy works... take advantage of my recommendations, every single one of them...

For a short time right now you'll be given access to "test drive" my method for just \$495 for the next six months.

That's a fraction of the \$2,900 regular price and term we set for this service. And one thing I can say for sure, we may never make this special offer available again.

It's an amazing opportunity to see for yourself just how powerful and beneficial **Money Map VIP Trader** can be... and just how effective it is at creating a new life of financial freedom for yourself.

Get in on the fiber play I'm talking about... take the opportunity to make serious gains on the "boring" (anything but!) pulp play I've described... take advantage of the 5 Biggest Trends in History - each of which can double, triple, even quadruple your money - should you choose to do so...

My goal here is to help as many people as I reasonably can. I've made investors millionaires over the years -

Dear Horacio,

"Thanks to you (in a good way) I will be paying taxes again. For the last 11 years I haven't paid any taxes due to the fact my Brokers (and especially the BEAR guy)... had us going short all the time and kept making us 80% losers.

"[Now] I am on my

and I've made other millionaires even richer. Now it's time to do the same for all my subscribers.

But my guess is, once you try **Money Map VIP Trader**, you'll be hooked for a long time. What's more... I also guarantee you'll never pay a penny more for your subscription than the price that you can get today.

It will NEVER go up no matter how long you subscribe.

Even better, you'll get my unconditional LIFETIME guarantee. That's right...

My Lifetime Guarantee Makes It Almost Too Easy

Try **Money Map VIP Trader** for the next six months at this special introductory offer. If you find you're not seeing the kinds of gains I'm talking about here in our track record, let me know anytime...

My lifetime money-back guarantee ensures that you will have the opportunity for these kinds of gains or your membership will be promptly refunded.

Yes, lifetime.

You see, my money-back guarantee with **Money Map VIP Trader** extends to the very last day of your subscription.

Why? Because the bigger the play, the longer it can take to squeeze out every last, fat drop of profit - and I don't want you to miss one cent.

So if you are dissatisfied with your membership for any reason whatsoever, you can cancel anytime and receive a 100% refund on the balance of your subscription. That's how confident I am that you'll be blown away by the results.

The Deadline Is Fast Approaching

It has never been more important to take advantage of the global economic trends and profits **Money Map VIP Trader** can alert you to.

After nine years of uncertain returns in U.S. markets, uncertainty in the Middle East, fluctuating oil prices, and inflation ready to rear its ugly head, navigating the investing landscape is difficult enough - even for the most avid investor...

Yet, **Money Map VIP Trader** can erase years of doubts about the markets. And

[NOW] I am on my way to recovery. Right out of the gate I started making a few thousand. If I had the capital 11 years ago, I would have said Thousands and Thousands.

"Thanks again for your expertise. God Bless you and your Family."

- Alex H.

"What a great service this is! Congratulations on the clear and well-informed advice that you give your readers - I am very happy with the recommendations... I will certainly be watching your future advice with great interest."

- Mark E.

you can start with the very next recommendation.

And as with oil, untold fortunes will be made by those who invest now.

Time is of the essence. Every day that goes by the network crisis in America and across the world worsens. Bandwidth demands are increasing at the greatest rates in history. Never before have we seen demand for anything grow by over 4,000%, 5,000%, even 6,000% in the span of a couple of years.

And then double every year for the next three years!

But without **Money Map VIP Trader**, you're almost certain to miss out.

I beg you, don't let that happen. Secure your spot now - and try my **Money Map VIP Trader** method over the next six months, along with my Lifetime Money Back Guarantee.

We've gone so far as to remove any possible barrier between you and the wealth you deserve to make. Enough in many cases to take your spouse on that round-the-world trip you've always dreamed of.

Of course, you'd never have to tell him or her how it was made possible - unless of course you choose to.

So I urge you - act now. Simply [click here](#) and follow the instructions to sign up. For faster service, call **1-888-570-9830** or **1-410-454-0498** during business hours and mention priority code **EMMTL202** to begin your subscription immediately.

Again, time is of the essence... This special opportunity will end very shortly.

I look forward to welcoming you aboard, and to the continued joy of one profit opportunity after another.

Sincerely,

Horacio Márquez
Founder and Editor
Money Map VIP Trader

Bert Thompson, a retired real estate executive living Florida, used my strategy to make \$1.1 million on gold, without options or commodities futures.

Florencia Pugliese, an elderly retiree, used this strategy to guarantee her retirement income at 53% a year for the first ten years... and a total return of 6,962%... on a little-known bond investment - without options.

P.S. Never have I seen a company increase its income by 45 times in the span of three quarters. This is a rare and unique situation, driven by the looming collapse

in the networks in the U.S. and abroad. It's no wonder this company is poised for a spike of 412% in the coming months. Test drive ***Money Map VIP Trader*** and see for yourself how powerful my research is - all for less than the cost of your daily Starbucks. But please act now: This special offer may end at any time.

P.P.S. There's something else that's just as critical to saving America from "Going Dark." It's a company about to own the market for optical "switches," the key component that tells data where to go, just like a train on a track. Considering the leverage this small firm has - and its 7-fold increase in net income - gains could exceed 622%. Accept my invitation now, and I'll rush you the details on this company, too!
